

Reporting Period: Week 9 (8 May 2026)

Internship Weekly Report (COMP8851/COM8860)

Student Name: Felix B Susanto

Student ID: 48067563

Company Name: Truth

Supervisor Name and email: Mike Simpson – mike.simpson@truth.id

Reporting Period: (e.g., Week 1 + SUBMISSION DATE)

1- Provide a summary of the goals, activities, and outcomes for the week:

Goals: The main goal for this week was to support the other intern team (Yara, Devika, and Samip) because their task became a high priority for the company. We needed to help them add new document templates for classification and extraction to improve the system's ability to recognize various international IDs.

Activities: For my activities, I started by setting up the project environment on my local machine using Docker so I could run the system on my localhost. I worked through an Excel file that contained a list of documents for testing. For each image, I ran it through the system to check how it performed at both the primary and secondary extraction levels. When the results were correct, I added them as templates by filling out metadata like classification codes, country codes, user/system prompts, and Textract rules JSON. I also spent time debugging cases where the extraction failed and documenting those results with detailed notes.

Outcomes: As an outcome, we successfully expanded the library of templates for the classification backend. I was able to verify which documents were extracting correctly at both levels and which ones needed more work. By filling in the specific prompts and JSON rules, I helped ensure the system has a clearer guide for future scans.

2- Describe any new knowledge, skills, or experiences gained over the week:

Knowledge: I learned more about how "System Prompts" and "Textract rules" work together to tell the AI exactly which parts of a document to read.

Skills: I improved my skills in using Docker to run a professional backend project locally and learned how to troubleshoot errors in a local environment.

Experience: I gained experience in "Agile" teamwork by quickly shifting my focus to help another team when the company's priorities changed.

3- What experiences were particularly rewarding during this report period?

It was very rewarding when a document passed both the primary and secondary extraction levels perfectly. It felt good to see the "success" result after carefully setting up the JSON rules and prompts for a new template.

4- What experiences were particularly difficult during this report period?

The most difficult part was debugging the documents that failed. Sometimes it was hard to tell exactly why the extraction was incomplete, and I had to spend a lot of time checking the logic to see if it was a system error or a problem with the image quality.

5- During past week, how did you feel/deal when you face a challenging situation (Please tick the box if relevant/applicable):

- ☐ I did some exercise to relieve pressure.
- ☐ I spent some time with family/friends, and got engaged in social activities to feel better.
- ☐ I experienced some appetite/weight change.
- ☐ I postponed dealing with the issue, due to lack of concentration.
- ☐ I spend some time at night using social media to distract myself.
- ☐ I took short naps during the day to relieve the fatigue.
- ☐ I ignored some of the difficult problems and continued with other tasks.
- ☐ I experienced some pains, e.g., headache and back pain.
- ☐ I felt under pressure.
- ☐ I had no time for routine outdoor activities and pleasures.
- ☐ I found no challenging situation.

6- What other actions made you feel better in/after challenging situations if any?

When I ran into a failed test that I couldn't fix immediately, I felt better by writing very detailed notes about the failure. This way, I knew the information would be useful for the developers later, and I didn't feel like I was stuck.

7- How did you manage to deal with new problems? (Multiple choices)

- ☒ I found myself struggling to solve unfamiliar problems.
- ☐ I went with the first solution that came to my mind
- ☐ I preferred not to talk over problems with other people
- ☐ I tried to find ways of doing things even when they sound impossible
- ☐ I tried to use techniques that help me think differently
- ☒ I preferred to ask help from others to solve my problems faster
- ☐ I suggested a new idea in my work that previously did not consider in that company.

8- Please provide suggestions or feedbacks that you like to improve in your workplace.

Since we are manually entering a lot of details (classification codes, prompts, etc.) for each template, it might be helpful to have a "cheat sheet" or a small automation tool that helps generate the JSON format faster to avoid human error.

9- Describe principal tasks and duties to be performed and accomplishments during the upcoming week.

Next week, I will continue working through the remaining document samples in the Excel list. My goal is to finish adding as many successful templates as possible and provide a final summary of the failed cases to Yara and the rest of the team.
